### Complete plants

Apart from special plant components and specifically developed technologies, ALCUTEC plans and builds whole re-melting plants that include complete recycling systems and the entire shredder equipment.

ALCUTEC seeks the cooperation with experienced specialist firms, when components are required for which the company cannot offer strategies of its own. However, the ALCUTEC know-how will always be incorporated in the process of designing the entire plant strategy, in order to ensure smooth and efficient operations. This cannot only be seen from the specification and selection of these components, but also especially, when and where the interfaces are arranged. This is where ALCUTEC can offer its convincing and conclusive strategies.
